

HGS Local – Git Cheat Sheet

Basic commands to update your GitHub repo

0) One-time setup on a new computer:

```
git config --global user.name "Your Name"
git config --global user.email "you@example.com"
```

1) Go into your project folder:

```
cd /path/to/hgs_internal_tools
```

2) Check status and pull latest (optional but good):

```
git status
git pull
```

3) After making changes (HTML, manuals, etc.):

```
git status
git add .
git commit -m "Your message here"
git push
```

Core workflow to remember:

```
git status
git add .
git commit -m "Your message here"
git push
```

If Git says "no upstream branch" for main:

```
git push -u origin main
```
